April 19, 2006

Palm has announced the release of software update 1.10 for the Palm Treo 700w. This new release features the Microsoft Security and Feature Pack along with a few enhancements.

The software (version 1.10) provides the following updates:

- Enterprise email support with Microsoft's Messaging and Security Feature Pack (MSFP) with Direct Push Technology for automatic wireless synchronization of email, calendar, contacts and now tasks with Exchange Server 2003 with Service Pack 2
- Enhanced email capabilities, including more support of push email solutions, such as Wireless Sync, Verizon Wireless' email solution for Domino and Exchange environments; and enhanced synchronization capabilities with the ability to maintain an active data connection after POP or IMAP email synchronizations, and the ability to auto-synchronize all email accounts based on user settings
- Updated memory management
- Pictures and Videos application enhancements
- New Wireless Manager that provides an updated interface for turning wireless radios on and off on the Treo 700w smartphone

The software update is not available wirelessly and must be performed via ActiveSync. More information and directions for installation can be found at Palm.
